MUSIC OF BOTSWANA

Composers and artist

What is music?

Music is a combination of sounds that are pleasing to listen to. You can make music by singing or playing musical instrument.

The difference between a composer and an artist

a) Composer
This is a person who arranges notes into a tune. The arrangement of the notes is called a composition.

b) Artist
An artist is a person who plays the tune on a musical instrument or sings the words.

FAMOUS COMPOSERS OF BOTSWANA ORIGIN

Name of composer	**Name of composition**
Kgalemang T. Motsete	Fatshe leno la rona
Luka Disho	Sir Seretse Khama
Gomolemo Motswaledi	Leisong
Ricks Morake	Dintlenyane tsa Botswana

FAMOUS TRADITIONAL ARTISTS FROM BOTSWANA

Name of Artist	**Name of composition**
Speech Madimabe	Sebodu ke nnenekwane
Ratsie Setlhako	Kaponwane
Gaotwesepe Robalang	Go ka tweng?

FAMOUS ARTISTS OF MODERN MUSIC

- Vee
- Maxy
- Mega V
- Duncan Senyatso
- Soccer Moruakgomo
- Ndingo Jowa
- Ashley Gops
- Machesa
- Kgobola
- Alfredo Mos
- Sca
- Oracle
- Kast
- Lily
- Mr. Tagg
- Stagga
- Skizo
- Eskimos

Significance of music in society

Music plays a very important role in the lives of man. It is an essential part of human life because of the following reasons;

- It entertains
- It communicates messages
- It can be used as a symbolic representation
- It is a form of emotional Expression
- It stimulates physical response
- It tells people about their own culture

COLLAGE, MOSAIC AND MONTAGE

Learners should be able to:
describe mosaic, collage and montage.
identify materials used for mosaic, collage and montage.
create pictorial composition using either mosaic, collage or montage technique.

Collage

A design or picture made by pasting different cut off materials on a surface. The surface could be paper, cardboard, wooden boards and cloth. The materials are arranged and pasted to create a well-planned design or picture. These materials could either be natural or man-made.

Collage materials

sweet-wrappers, tissue papers, newspapers, cardboard, magazine papers, and other materials such as wool, cloth and threads. The natural materials would be wood, tree barks, grass and twigs.

Mosaic

Mosaic is a design made up of materials such beads, small stones, sand, crushed eggshells. These could be fixed in muddy surfaces such as cement, or glued to surfaces such as paper, boards and walls.

Mosaic materials

small stones or shells can be painted and varnished and used to create a mosaic composition. Materials such as grains, beans and seeds could also be used. Newspapers,
magazines and coloured papers are cut into small sizes and used to create very interesting mosaics composition.

Tools for mosaic making

These would be such as paintbrushes, toothbrushes, knives, scissors and paint-palette (bowls for mixing paints).

Montage
A picture of art made by sticking pieces other materials such as photographs, magazines and newspapers on a flat material like Manila paper.

Materials for montage
Materials such as newspapers, magazines and photographs could be used.

Tools for montage making
These would be such as paintbrushes, toothbrushes, knives, scissors and paint-palette (bowls for mixing paints).

MEDIA

VISUAL COMMUNICATION

Visual communication is about sending a message that you can see instead of one which you can hear.

Visual communication is achieved by designing and drawing visual symbols to carry or send a message.

Advantages of visual communication

- Visual communication helps in re-enforcing oral communication because not only does the recipient hear, but also sees what is being said with his or her eyes.
- It can also reinforce written communication. For example, if you are reading about something and visual aids such as graphs, diagrams, and charts are added to the content that you are reading, it improves your understanding of what you are reading.
- Pictures and illustrations have stronger impact than words. Pictures can be used to tell things that words don't have the strength to tell.
- Visual communications can be understood by both literate and illiterate people.
- Visual communication jumps over the problem of language differences. With visual communication, it does not matter whether you can speak a particular language or not. For example, if you find yourself in China, you do not need to understand a word of Chinese before understanding the message in a picture in China or someone's angry posture or gesture.

Disadvantages of visual communication

- Visual communication can be very expensive. Unlike some other channels of communication like the oral communication, visual communication can be very

expensive to produce. The cost involved in producing it is one of its biggest disadvantages.

- Storing it can also be very expensive. it can cost quite a lot. Take a large billboard for example.
- It takes more time and effort to produce for example, visual aids such as graphs, maps, diagrams etc.
- One can easily misunderstand or misinterpret the central meaning of the message being delivered.

- The visually impaired cannot get the message since they cannot see.

Some forms of visual communication

- Posters
- Road signs
- Maps
- Newspapers and magazines
- Books
- Advertisements

The uses of visual communication

- They give warnings
- They give useful information
- They give instructions
- They advertise something
- They entertain

GYMNASTICS

Gymnastics involve exercises that aim to develop body management and body awareness.

Gymnastic movements

Travelling

Travelling means moving from one place to another. In gymnastics we can use different body parts to travel form one place to another.

Balancing

Balancing means keeping your body in a stable position. You can balance while staying in the same position or you can balance while moving. Movements such as standing, walking and running involve balance.

Landing

Landing means coming into contact with the ground. There should be preparation for landing while the body is still moving to where it should land. On landing both the knees should be bent to prevent injury.

Linking movements in gymnastics

Leaping

Leaping means jumping onto the air, or jumping in order to land on a different place.

Turning

Turning means spinning your body around. In gymnastics you can turn while standing, jumping or with your body on the floor. You can stay at one place when you turn or you can travel at the same time when you turn.

Counter balance and counter tension skills

Counter balance

This is where by two or more people balance against each other.

Counter tension

This is when two or more people are pulling against each other.

TIME RHYTHM

TOPIC: NOTES

What is rhythm in music?

Rhythm is the duration of the notes in a piece of music. Rhythm is also a regular beat.

All music has a rhythm.

Staff notation

Note Symbol	Note Name (British)	Note Name (American)	Note Value
	Semibreve	Whole Note	4 beats
	Minim	Half Note	2 beats
	Crotchet	Quarter Note	1 beat
	Quaver	Eighth Note	½ a beat
	Semiquaver	Sixteenth Note	¼ a beat

SATISFACTION OF NEEDS AND WANTS

People satisfy or meet their needs and wants by buying or purchasing consuming goods and services.

Subsistence farmers satisfy their needs **directly**, they plan what they will need in the future and they grow enough to meet this need.

Someone who buys goods from the shop is satisfying his or her needs **indirectly.**

In the past people used barter system to exchange goods. Today what is more common is selling what you have for money, and using the money to buy what you want. A farmer may sell cows to BMC and be paid in money. He then uses the money to buy jersey and other things.

At work, parents may render services for which they are paid money every month

BUGDGETING

What is a budget?

A budget is a plan on how to spend money. A budget helps to spend money wisely.

IMPORTANCE OF BUDGETING

- It gives you control over your money.
- It enables one to avoid spending unnecessarily on things that are not important.
- Helps you organize your spending and savings.
- Makes you to save for unexpected and expected costs.

PARTS OF A BUDGET

1. Income

This is money earned or received “cash inflow”.

2. Expenses

Monthly expenses are those things that you spend your money on every month. Most common expenses are fixed expenses such as rent. It shows “cash outflow)

3. Net income

It is the amount of your income once all expenses have been paid “left overs”.

4. Savings rate

This is the amount of money you choose to save each month or year.

Effective ways of budgeting

a) Track your spending or record all things you buy for an at least a month.

b) Make savings from your earnings at least 10%.

c) Define spending priorities by deciding what is most important to you and cutting back things which are not important.

d) Pay using cash than using credit cards and debits cards as they make it is to overspend.

e) Live within your means by not competing with other people, competing with other people can end you spending more than you get ending in debts.

MAKING A BUDGET FOR P30.00

	P	t
Transport to and from school	12	50
2 bottles of fizzy drink	5	00
5 packets of chips	4	50
Payment of club dues	2	00
Payment of a loan	4	00
Savings	2	00
Total	30	00

BUSINESS

A business is an organisation or economic system where goods and services are exchanged for one another or for money.

GOODS AND SERVICES SUPPLIED BY BUSINESSES

Goods are things that you use such as bread, clothes or electricity and services are things that people do to help you, for example, teaching is a service as well as nursing.

Some businesses offer both goods and services, for example, a restaurant provides food (goods) but they also cook food to serve people (service)

<u>Analysing different goods and services supplied by businesses</u>

a) **Raw materials**
   Agriculture and mining businesses are concerned with the production of raw materials, such as plants or minerals. Additional examples include latex, iron ore, logs, and crude oil.

b) **Component Parts**
   Manufacturers produce products, from raw materials to component parts, which they then sell at a profit. Companies that make physical goods, such as cars or pipes, are considered manufacturers.

c) **Equipment:**
   Equipment includes products used in production activities and operational activities. Equipment includes large buildings that serve as places of business for other companies. Real estate businesses generate profit from the selling, renting, and development such of properties.

d) **Processed Materials:**

   These products are created from raw materials and are used in the production of another product. Examples include food preservatives, textiles, metals and industrial glue.

e) **Business Services:**
   Service businesses offer intangible goods or services and usually make a profit by charging for labour or other services provided to government, other businesses, or consumers. Organizations including house decorators, repair services, consulting firms, restaurants, financial businesses, janitorial services, and even entertainers are types of service businesses.

f) Supplies:

These products enable both production and processes, but are not part of the final product. Examples include paper, pens, and cleaning agents. These items can be purchased from retailers and distributors and delivered by transportation businesses.

Identifying needs and wants of consumers by businesses

Successful businesses make profits by understanding their customers and identifying their needs.

Good customer research helps you choose products, style your marketing, and develop sales strategies for the people in your market created on reliable, correct information.

Customer research should be part of your overall market research and should be conducted regularly.

While your market research looks broadly at your customers, competition and industry to identify who you will market to, customer research provides more in-depth information on the needs, wants, expectations and behaviours of your customers.

Identifying your customers' needs and preferences allows you to style the strategies and tactics you use in your marketing plan.

POTTERY

Pottery is making things from clay.

<u>Sources of clay</u>

- River beds
- Dams
- Anthills

<u>Preparing clay for pottery for pottery making (dry clay)</u>

1. Crush the clay into powder.
2. Remove any stones or impurities by sieving through a mesh.
3. Mix the powder with water. Do not add too much water because the clay should be stiff.
4. Knead the clay until it is soft.
5. Roll the clay into ball and store it in an air tight container and leave it for a week before using it.

Pottery techniques

a) Pinching

This is when you use your thumb and fingers to squeeze the clay into a shape you want.

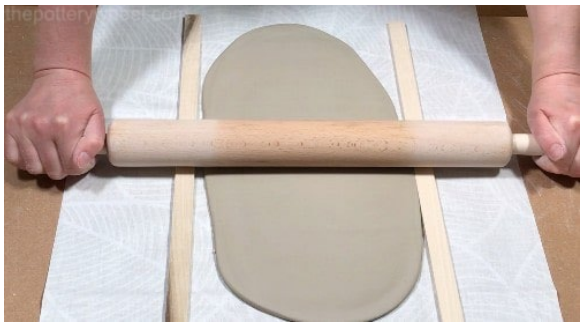

b) Coiling

This is using coils of clay to make round, hollow objects such as pots, bowls, mugs and jugs. The clay is rolled into long sausage like shapes and are coiled around a flat base to build up a required shape.

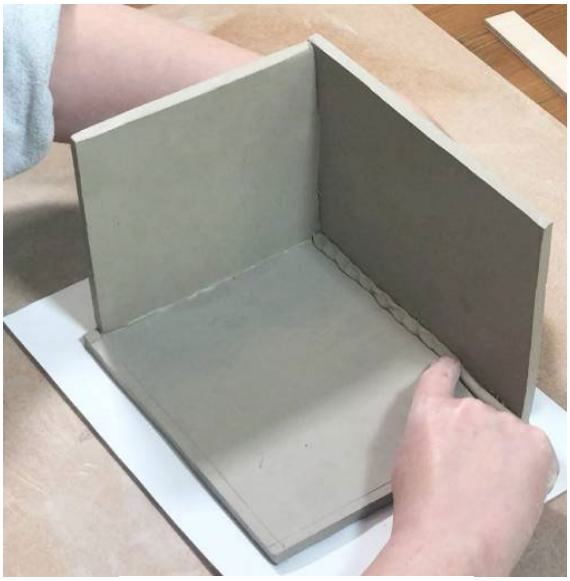

c) Slab

The flat pieces of clay are called slabs. One can use slabs to make objects such as tiles and boxes. The slabs are made by pressing and patting the clay and then rolling the clay with a bottle or rolling pin until about 2cm thick.

Rolling out slabs

Joining slabs together

<u>Decorating clay pots</u>

1. Give a textured surface by pushing, pulling, pressing or pinching with your fingers.
2. Cut or carve out designs using an art knife, pencil, fork, nail or handmade tool when clay is firm but not dry.
3. Use a small stone, plastic wrapped around a finger, or any other smooth object, such as back of the back of spoon, to polish the pot.
4. A dry pot can be dipped into paint or a coloured slip.

Burnishing clay products

This means applying or rubbing polish, wax, paint or anything on the surface of hard clay product to make it shiny.

Burnished clay jar

Firing clay

This means baking pottery products in a special oven called a kiln at high temperatures before using it. Firing makes clay hard and strong.

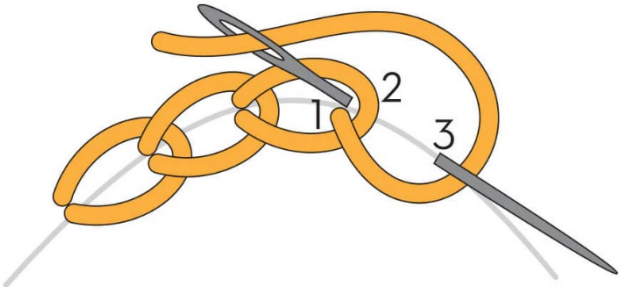

Fired clay pot

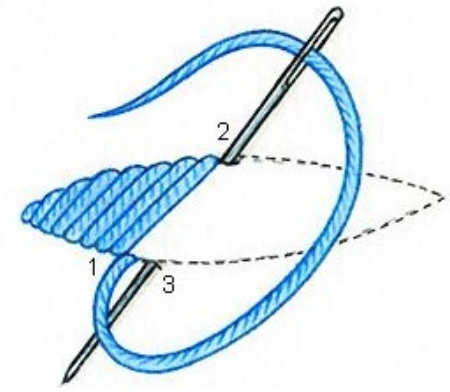

Embroidery stitches

Embroidery is an art of using stiches in a creative way to decorate clothing and household items.

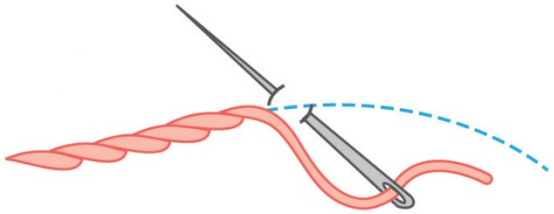

Below are examples of embroidery stitches:

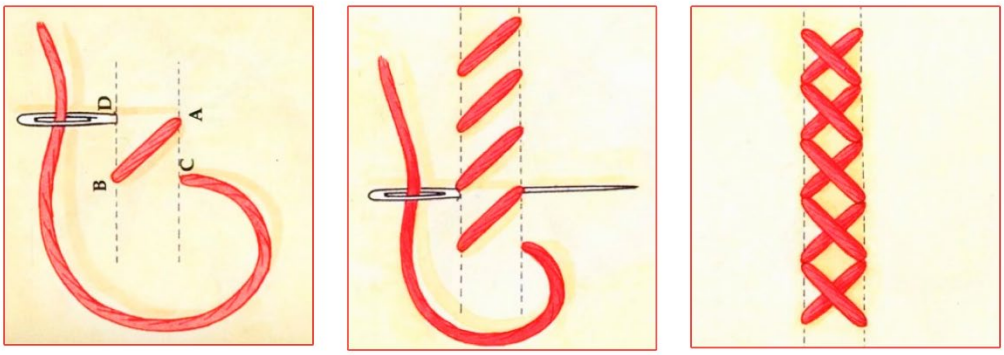

Chain stitch

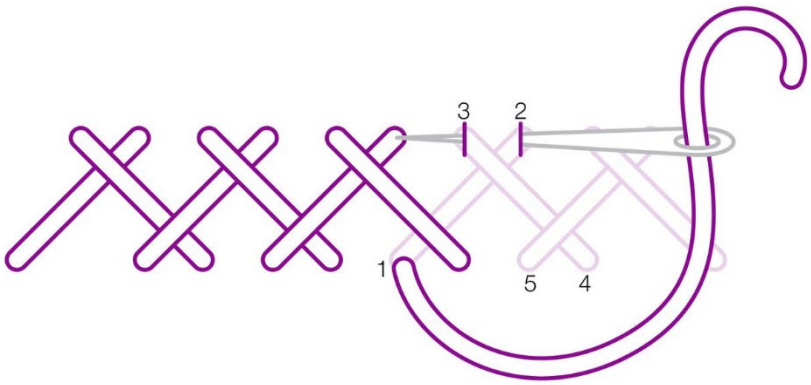

satin stitch

Stem stitch

Cross stitch step by

Herringbone stitch step by

Embroidery hand stiches applied on a project

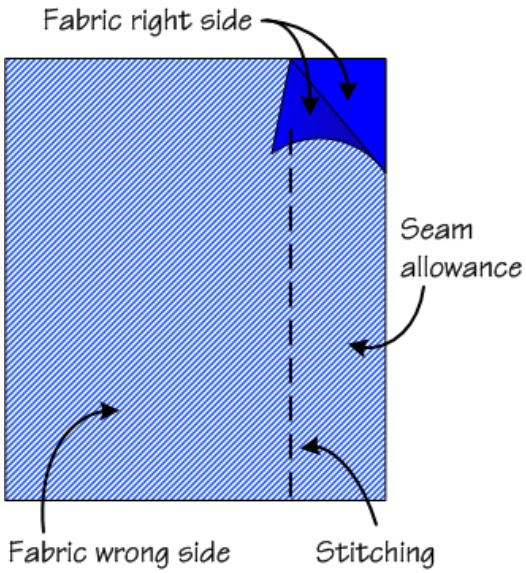

Seams

A seam is a line of stitches that join two pieces of fabric. In sewing, a seam is the join where two or more layers of fabric or other materials are held together with stitches.

<u>Types of seams</u>

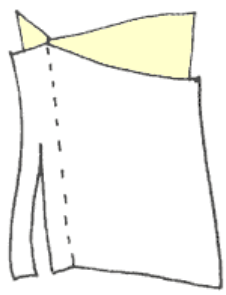

a) Open seam / plain seam

It is used if you are sewing a fabric which does not fray easily and if the seam does not have to be very strong.

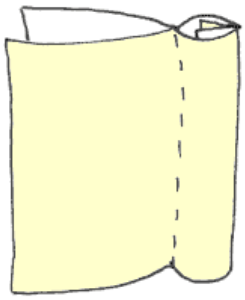

b) French seam

It is useful for fabrics that fray easily. It is stronger than that an open seam but cannot be used on a fabric that is very thick.

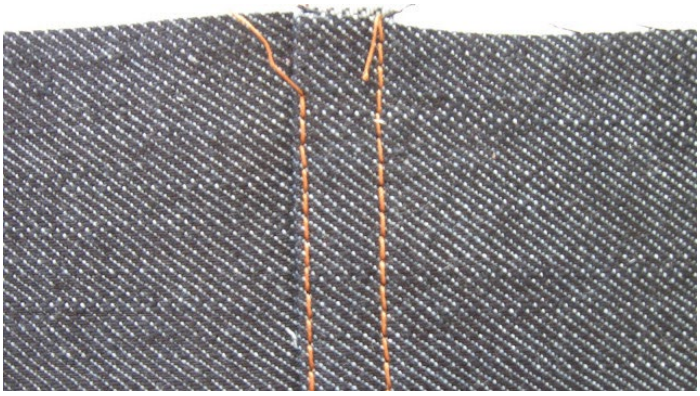

Step 1: Sew wrong sides together and trim seam allowance.

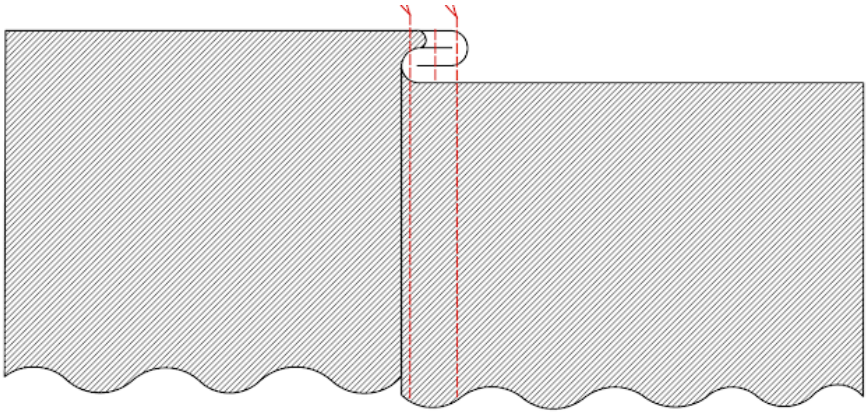

Step 2: Turn so right sides are facing and stitch close to the seam.

c) Flat-fell seam

It is used for clothing that is won next to the skin. It is often used on the side seams of jeans. It leaves a line of stitches visible on the outside of the garment.

MECHANISMS

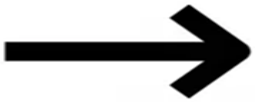

Mechanisms

A system or structure of moving parts in a machine that performs some function.

Mechanisms movements

There are four main types of movements that **mechanisms** can produce.

LINEAR MOTION

linear motion is anything that moves in a straight line. It is represented by and arrow.

RECIPROCATING MOTION

It is a repetitive up-and-down or back-and-forth linear motion. It is represented both a line with arrows on both ends. Example include sewing machine needle, pump engines, cutting blade etc.

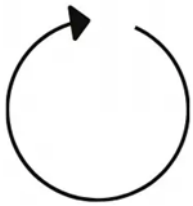

ROTARY MOTION

Rotary motion is anything that moves in a circle. Think of a spinning wheel bicycle wheel. The movement is represented by an open circle with an arrow.

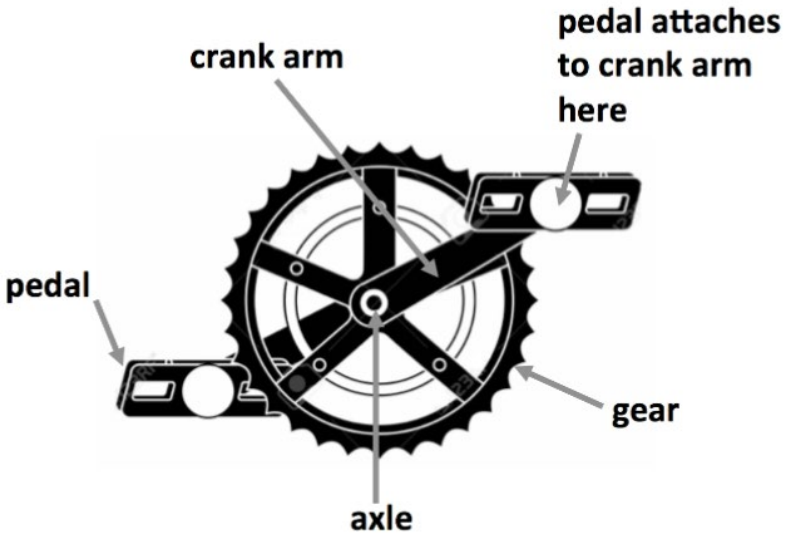

OSCILLATING MOTION

Something that oscillates moves back and forth like a swing forming an arc. It is represented by curved line with two arrow heads. This type of motion is found everywhere in our world: a sprinkler system and the pendulum of a clock.

Crank mechanisms

A crank is a mechanism that is used to turn or apply rotary motion to a shaft. An example of crank mechanism is the pedals of a bicycle.

The input and output of a crank mechanism

The input force is the force that is applied for example pedalling a bicycle in a rotary motion.

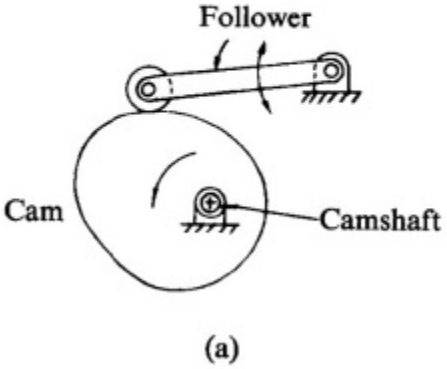

The output force is the motion the mechanism produces for example when the bicycle moves forward in a linear motion.

The mechanical advantage of crank mechanism

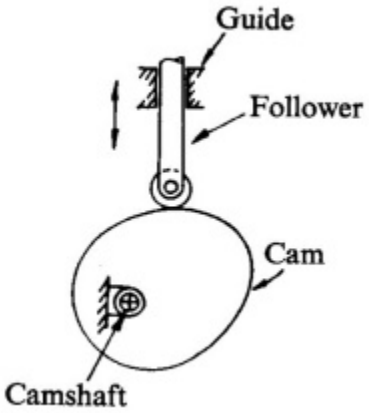

- Crank mechanism makes us to do heavy work with less effort.
- They change one type of motion to another e.g., rotary to linear like in a moving bicycle.

Cam and follower mechanism

A cam and follower change rotary motion into reciprocating motion. Do this, when a cam turns, it pushes the follower up and down. The diagram below shows how a cam works.

(a)

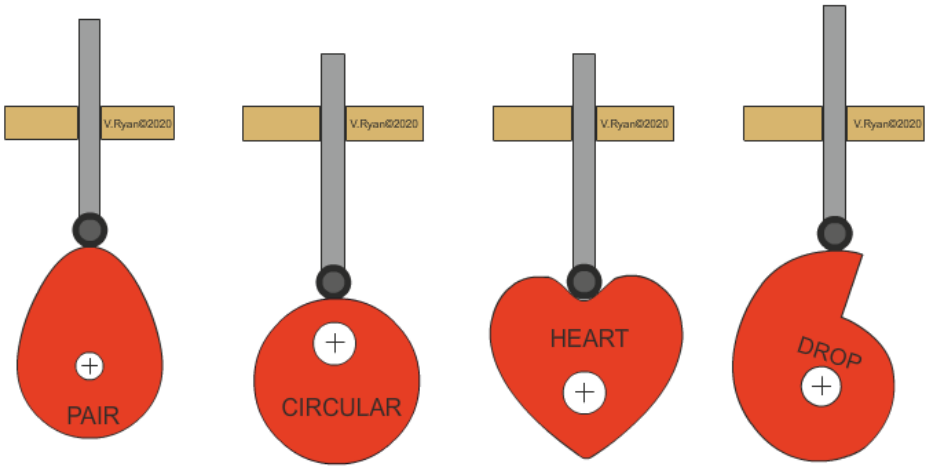

(b)

A cam can be a wheel with irregular shape.

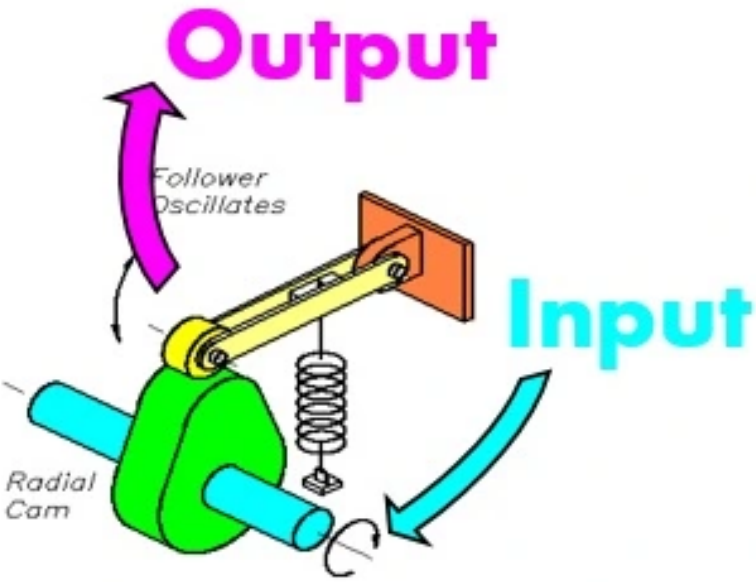

The follower is a bar designed to follow the shape of the cam.

TYPES OF CAMS

There are different types of cams, with different shapes. The shape makes the follower moves in different ways. The types of cams include pear, eccentric or circular, heart and drop and others.

The input and output of cam and follower.

CUTTING AND SHAPING TOOLS

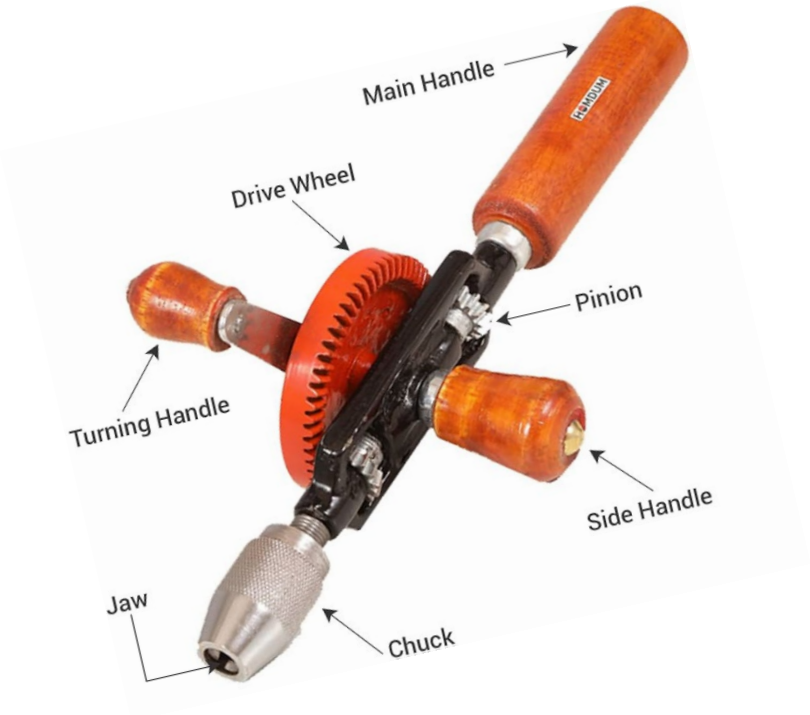

- Tenon saw
- Coping saw
- Hand drill
- Twist drill
- Bradawl
- Smoothing plane
- Flat surform
- Curved surform
- Round surform
- Hand file
- Half round file
- Round file

FINISHES

Finishing is the process of protecting and polishing wooden plastic surfaces which makes its appearance richer and deeper.

Types of finishes

- Paint
- wax
- varnish

Surface preparation

In the process of making products, materials are subjected to a variety of operations such as cutting and drilling. These operations leave behind marks and rough surfaces, thereby spoiling the beauty of the product. Also, such marks may hurt people who use the product. To remove marks and smooth edges and surfaces, we use abrasives.

Types of abrasives

There are different grades of abrasives, ranging from very coarse to extra fine.

Examples of abrasives

- Glass paper
- Garnet paper
- Wet and dry paper
- Steel wool

Finishing wood

- ✓ Before applying a finish, you must ensure that your surface is well prepared. This should include the following:
- ✓ Punch all nails below the surface.
- ✓ Smooth the surfaces with a smoothing plane.
- ✓ Smooth the surfaces with glass paper
- ✓ Fill cracks or holes with wood filler
- ✓ Rub down the surfaces with fine glass paper or steel wool
- ✓ Dust off the surfaces.
- ✓ Apply appropriate finish such as wax or varnish

Finishing edges of acrylic

Acrylic sheets usually do require any finish. They already have a good surface finish. The edges, however, will have to be smoothed and polished.

ENTREPRENEURSHIP

An entrepreneur is a person who identifies business opportunity, set up a business and run it profitably. The main functions of the entrepreneur are to:

- generate new business ideas, recognize business opportunities and determine profitable business ideas.
- plan the business and identify the resources required.
- bring together and organize resources into a business unit.
- take decision on what to produce, how to produce, where to produce and in what amount to produce.
- take responsibilities and risks of employing resources of land, labour and capital to produce goods and services.

In Botswana entrepreneurs are important because they help the economy in the following ways:

- As many people become self-employed there is a meaningful drop in unemployment numbers.
- Success is spread among many people.
- It is likely that new products and technology will be developed
- Job opportunities can be created.
- There will be fewer crime and welfare problems.

ENTERPRENEURIAL SKILLS

Skills of an entrepreneur

planning, marketing, organizing, making decisions, interpersonal, leadership, communication etc.

Apart from these general skills, there are some skills on which your business can be based, such as drawing and painting, cooking, playing of musical instruments, mending things, singing, dancing, etc.

Qualities of an entrepreneur

hard working, self-confident, focused, adaptable, honest, healthy, independent, perseverance.

Lack of the basic business skills and qualities may lead to business failure. Businesses can also fail because of the following:

- The owner does not know how to run a business
- The owner does not know enough about the activities of the business
- Lack of management skills
- The owner does not keep proper records of transactions

- The business may not be located in the right place
- A disaster such as flood or fire can cause a business failure.

The entrepreneurial qualities or business skills can be learnt, for example in class. There are also business schools which can help to develop entrepreneurial qualities and skills. The government provide assistant to entrepreneurs who have very bright business ideas but do not have money.
