STANDARD 5 REVISION QUESTIONS
SCIENCE WHOLE SYLLABUS

STANDARD 5

MODULE 1: SCIENCE AND SOCIETY

1. Thapelo looked carefully at one insect and discovered that it has eight legs and two body segments. What scientific process did he demonstrate?

   A Communication.
   B Experimenting.
   C Observation.
   D Predicting.

2. Choose how you will demonstrate different scientific processes by matching them with their activities in the table below.

Scientific processes	Activity
i. Observing	A Taking information to others
ii. Communicating	B Giving the possible answer
iii. Experiment	C Suggestions after the result
iv. Hypothesis	D Testing to see the results
v. Analyse	E. Looking at something carefully

3. There is a flood in Toromoja, soil is eroded and plants are destroyed; as a result animals and plants do **not** have food to eat. What is this kind of problem called?

   A Human problem.
   B Animal problem.
   C Environmental problem.
   D Air problem.

4. Beco planted spinach in one plot during the first year; he continued to do that for the following two years, which problem is he likely to cause?

   A Human problem.
   B Crop rotation.
   C Environmental problem.
   D Selling vegetation.

5. Ploughing across a slope is a solution to

   A soil erosion.
   B crop rotation.
   C flooding.
   D slope ploughing.

MODULE 2: NATURE AND THE UNIVERSE

THE ENVIRONMENT

1. Which of the following describes the interaction between the living and the non-living components in an environment?

   A Air makes water, soil holds the water for plants, and plants make their own food, hold soil with their roots to prevent soil erosion and die to form manure.
   B People eat plants, they cause soil erosion, water and plants disperse seeds, water causes floods and flood is good for plants and animals.
   C Sun heats the ground to cause evaporation and rain is formed with lightning which kills people. People die and are eaten by worms.
   D People make food, plants are eaten by other animals, the sun makes the animals dry and people eat them.

2. Which of the following statements is false?

   A Nothing can live without water.
   B All the energy on earth comes from the sun.
   C All living things need air.
   D People and animals live where there is no soil for food production.

3. Humus is good and it is the nutrients for

   A people.
   B plants.
   C animals.
   D children.

4. Which of the following statements is true?

   A Interaction between non-living and living means they affect and influence one another.
   B They can produce young ones together.
   C They do not live together, they are separated.
   D Small organisms cannot help other animals.

5. If the environment does **not** provide adequate water, this will reduce the

   A animal holding capacity.
   B carrying capacity for organisms.
   C water holding capacity.
   D plants holding capacity.

6. The following are factors that can affect the carrying capacity of an environment.

   A Water, plant food, soil, animals.
   B Rocks, plants, water, animals, soil.
   C Houses, cows, old people, schools.
   D Water, diamond, technology and plants.

7. If plants nutrients are **not** enough, this will result in immediate reduction of

   A plants.
   B water.
   C nutrients.
   D animals.

8. Overcrowding of animals in a small area will result in affecting

   A soil texture which will lead to soil erosion.
   B soil structure which will lead to soil erosion.
   C soil formation which leads to soil erosion.
   D soil constituents which will lead to soil erosion.

9. The more the number of plants in an area, the more the number of

   A animals.
   B space.
   C soil.
   D minerals.

PLANTS

10. If you cover a plant leaf with a black plastic bag for 3 days, and then uncover it, you will discover that it is whitish in colour. This shows that

A water is necessary for photosynthesis.
B air is necessary for photosynthesis.
C sunlight is necessary for photosynthesis.
D chlorophyll is important for photosynthesis.

11. Bend a leaf from a green plant into a bottle that has potassium hydroxide. Cover the bottle with a cork, leave for 2 days then test for starch on the leaf, the leaf remains whitish; this shows that potassium hydroxide has removed

A carbon dioxide which was necessary for photosynthesis.
B water from the plant.
C water from the bottle.
D chlorophyll from the leaf.

12. After investigating conditions necessary for photosynthesis, a student discovered that the following are necessary except

A water.
B carbon dioxide.
C stomata.
D chlorophyll.

13. What is the importance of photosynthesis to plants?

A Plants make sunlight.
B Plants make their own food.
C Plants make water.
D Plants make chlorophyll.

14. Which of the following is necessary for photosynthesis?

A Nitrogen.
B Carbon dioxide.
C Oxygen.
D Hydrogen.

15. What is the importance of photosynthesis to animals?

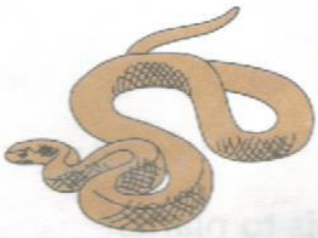

A Photosynthesis makes food for animals.
B Photosynthesis makes plants for people's houses.
C Photosynthesis cooks food for animals.
D Photosynthesis fertilizes plants for animals.

ANIMALS

16. _____ is a characteristic of a vertebrate.

A Covered with scale.
B Has a backbone.
C Has no backbone.
D Can vibrate.

17. The animal below can be classified as a

A poisonous invertebrate.
B mammal.
C vertebrate.
D crawler.

18. The word invertebrate means animals

A. that are vertical.
B. that have a backbone.
C. with no vertebra.
D. that vibrate.

19. Invertebrates have no spine.

A. True.
B. False.
C. False except for insects.
D. True for insects only.

20. Which group below is a list of invertebrates?

A. Snake, tortoise, lizard, worm.
B. Millipede, centipede, worm, butterfly.
C. Lion, goat, sheep, cow.
D. Snake, centipede, worm, housefly.

21. Which animal is wrongly classified?

Vertebrate	Invertebrate
A Ants	C Praying mantis
B Dove	D Grasshopper

AIR

22. What is air made up of? Air is a mixture of

A gases.
B oxygen and nitrogen.
C carbon dioxide and oxygen.
D hydrogen and oxygen.

23. Which list below shows the major components of air?

A Helium, carbon dioxide, nitrogen, carbon dioxide.
B Oxygen, carbon dioxide, carbohydrates, nitrogen.
C Nitrogen, oxygen, carbon dioxide, vapour.
D Nitrogen, hydrogen, water, carbon dioxide.

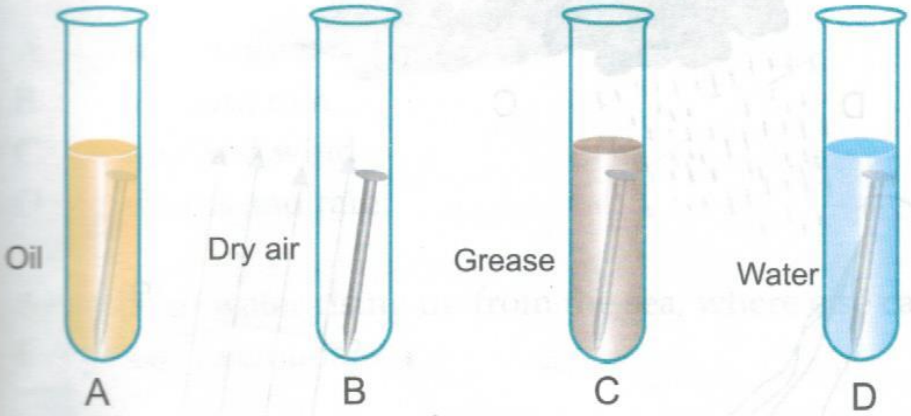

24. Which are the air properties?

A Colourless, odourless, tasteless, invisible.
B Mass, exerts pressure, white, tangible.
C Odourless, square, maroon, tasteless.
D Can compress, when heated it contracts, supports combustion.

25. Pelonomi took a spoon on a rainy day; she put it in water outside the house. She took another spoon and put it in the house with no water. After 3 days the one in the water turned brown. This demonstration shows that

A rain water causes rusting.
B air and water causes rusting.
C objects outside the house will rust when it rains.
D objects in the house will not be changed by the rain and the sun.

Use the pictures below to answer the question.
Mr Malokana took 4 nails and put them in the following containers.

26. In which container will the nail rust?

A With oil.
B With dry air.
C With grease.
D With water.

WATER

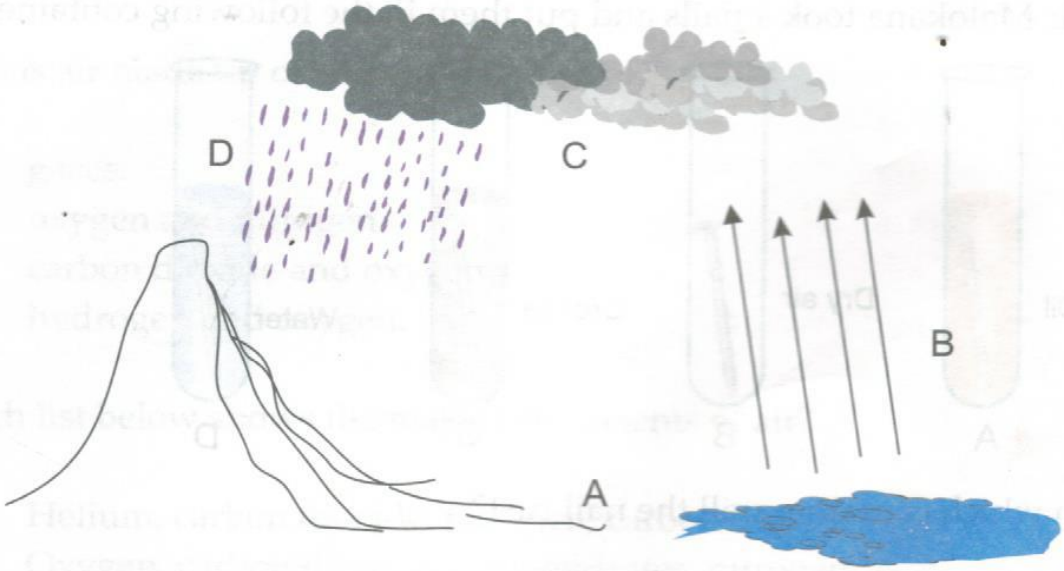

27. When it rains, water is collected in the following water sources for human activities except in

A seas.
B rivers.
C atmosphere.
D dams.

28. Ground water can naturally come to the surface of the earth as a

A well.
B pond.
C spring.
D lake.

Study the picture and use it to answer questions 29 to 31

29. Process A shows

A condensation.
B evaporation.
C precipitation.
D freezing.

30. Process B shows

A condensation.
B freezing.
C rainfall.
D evaporation.

31. Process C shows

A condensation.
B clouds formation.
C condensation.
D rainfall.

32. Agents for process at B are

A sun and wind.
B sun and rain.
C rain and wind.
D clouds and rain.

33. Apart from water rising up from the sea, where else can water come from to form clouds?

A Plants.
B Animals.
C Mines.
D People.

34. _____ are used to collect water from our house roofs when it rains.

A Reservoir.
B Wells.
C Big tanks.
D Lakes.

35. _____ is a list of some ways of collecting water.

A Dams, wells, tanks, reservoirs.
B Rivers, wells, digging, planting.
C Dams, boreholes, buckets, cans.
D Rocks, wells, ponds, putting buckets under trees.

36. Which of the following is **not** a good way of conserving water?

A Wash your hands and brush your teeth regularly under open tap.
B Plant drought resistant crops.
C Use water for more than one purpose.
D Repair or report leaking water pipes at Water Affairs.

37. Rinsing dishes in the bucket of water and then using the same water to water the plants shows that the person is

A very dirty.
B conserving water.
C making vegetables dirty.
D very poor.

38. Which of the following can man use to store water?

A River.
B Pool.
C Dam.
D Sea.

39. Towns and cities store water in

A reservoirs.
B ponds.
C rivers.
D pit.

40. Evaluate this statement.
"Pumping water to the surface is expensive and is an effect of water shortage."

A True.
B False.
C True and false.
D Partially true.

WEATHER

Match the weather conditions below with the instrument you will use to measure for no 41 to 45.

41.	Rainfall	A	Thermometer
42.	Humidity	B	Anemometer
43.	Temperature	C	Hygrometer
44.	Air pressure	D	Rain gauge ✔
45.	Wind speed	E	Barometer

46. In which one of the following places will you place a rain gauge to collect rain water for correct measurement?

A Next to a roof.
B Under a roof.
C Under a tree.
D In an open space.

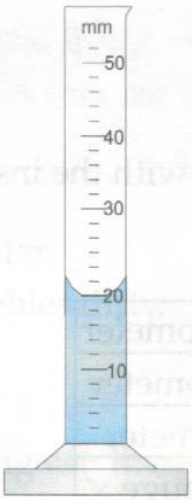

47. What is humidity?

A The hotness and the coldness of an object and a substance.
B The amount of moisture in the air.
C The amount of force exerted by air on the atmosphere.
D The speed of wind.

48. Which statement below defines the universe?

A Stars and the moon.
B All planets and stars.
C All planets, stars and the moon.
D Everything that exists.

Use the picture below to answer question 49.

49. Bobo collected rain water, poured it into a measuring cylinder. How much rain water did she collect?

A 10mm.
B 20mm.
C 50mm.
D 22mm.

50. Which one of the following units will you use to measure temperature?

A cm.
B cm.
C °C.
D Seconds.

51. Which one of the following is **not** a common body in the solar system?

A Planet.
B Moon.
C Stars.
D People.

52. _____ is the nearest star to the earth.

A Neptune
B Venus
C Mars
D Sun

53. The Earth is a different planet from others because it supports life: it has the following things to support life except

A water.
B suitable temperature.
C sodium chlorine.
D good atmosphere.

MODULE 3: MATTER AND ENERGY

1. What is a state of matter that takes the shape of the container?

A Solid.
B Liquid.
C State.
D Gas.

2. Which least shows properties of metals?

A Shinny, soft, weak in strength, low density.
B Hard to melt, shiny, hard, strong.
C Strong, soft, dull, shinny.
D High density, conduct heat well, dull, soft.

3. Metals are strong; as a result they can be used for the following.

A Building bridges.
B Burning.
C Make heads of matches.
D Making dresses.

4. The following are uses of non-metals except

A making ploughing equipment.
B making matches heads.
C diamond can drill boreholes.
D conduct electricity.

5. The following are properties of air except

A occupies space, invisible, can be compressed.
B when heated it expands, when cooled it contracts.
C supports combustion, has mass, exerts pressure.
D heavy, black, takes clothes.

6. Which of the following solids is non-metal?

A Iron.
B Diamond.
C Steel.
D Chrome.

7. Which of the following solids is a metal?

A Phosphorus.
B Coal.
C Tungsten.
D Stone.

8. Aluminium is a shinny metal, so it is used for making

A mirrors.
B water.
C jewellery.
D pots.

9. The coal and wood can burn, so they can be used for

A making poles.
B cooking.
C mining.
D building.

10. Which one of the following is **not** a list of common household chemicals?

A Salt, sugar, baking powder.
B Epsom salt, yeast, sugar.
C Vinegar, oil, liquid soap, liquid cleaner.
D Insect spray, bottled gas, maize, rice.

11. Which of the following household substances is correctly classified?

A	B	C	D
Salt	Vinegar	Paraffin	Stone
OilSugar	Epsom	salt	Milk
Insect spray	Baking powder	Bread	Oxygen

12. Which of the following household chemicals is correctly matched with its uses?

A Vinegar – washing.
B Salt – perfuming.
C Sugar – make food sweet.
D Oil – greasing pots.

13. Which of these substances is a good conductor of heat?

A Rubber.
B Aluminium.
C Glass.
D Plastic.

14. What is energy?

A Power of God.
B Ability to do work.
C Ability to move and rest.
D Moving up.

15. Which is a list of different forms of energy?

A Power, run, eat, kinetic.
B Heat, run, kinetic.
C Potential, kinetic, chemical.
D Light, electrical, paraffin.

16. What type of energy is produced by batteries?

A Heat.
B Light.
C Electricity.
D Chemical.

17. Which of the following energy sources is wrongly classified?

	Renewable energy	Non-renewable energy source
A	Solar	Coal
B	Wind	Oil
C	Hydro electricity	Gas
D	Gas	solar

18. Human body, plants, germs and bacteria are organisms that get their energies from a process called

A respiration.
B transpiration.
C evaporation.
D photosynthesis.

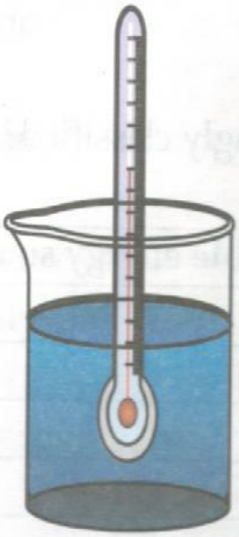

19. Which one of the following is not a source of heat energy?

A Burning fuel.
B Electric current.
C Friction.
D. Moon.

20. The following are uses of heat except

A relieves pain, dries things.
B bends or welds medals.
C produces steam and cook.
D burns veld and keeps things warm.

21.

When the temperature increases the mercury in the thermometer _____ because the liquid always _____ when heated.

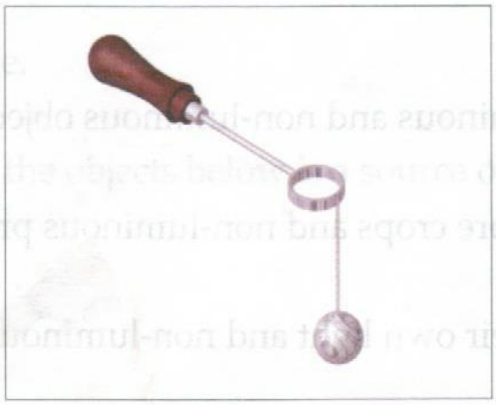

A becomes cold, rises.
B expands, rises.
C contracts, cools.
D rises, expands.

When something is heated its temperature will rise but its volume will stay the same.

22. The statement above is

A true.
B false.
C partially true.
D partially false.

Use the diagram below to answer question.

23. The ball could easily pass through the ring but after it was heated it could not pass because all state of matter _____ when heated.

A cools.
B goes up.
C expands.
D reduces.

24. Which of the following are not sources of light?

A Sun, stars.
B Fire fly, fire flames.
C Lighting torch.
D Moon, shinning tin.

25. Fire is a form of energy that is

A natural.
B artificial.
C natural and artificial.
D man made.

26. Which of the following is a source of light?

A Firefly.
B Housefly.
C Butterfly.
D Grasshopper.

27. Differentiate between luminous and non-luminous objects.

A Luminous produce more crops and non-luminous produce more weeds.
B Luminous produce their own light and non-luminous do not produce it.
C Luminous give birth to young puppies and non-luminous reflect light.
D Luminous do not produce light but non-luminous do not help luminous.

28. When light from a luminous object falls into a non-luminous object it bounces and comes to our eyes to form images in the retina. This process is called

A refraction.
B reflection.
C reaction.
D recreation.

29. When light falls on an irregular surface the light rays

A score.
B go up.
C scatter.
D regulate.

30. Light bouncing on a smooth / regular surface will

A scatter.
B go up.
C reflect.
D regulate.

31. Which one of the objects below is a source of sound?

A

B

C

D

32. Which one of the following is not a natural source of light?

A Star.
B Sun.
C Moon.
D Candle.

33. Which one of the following is a natural source of light?

A Firefly.
B Candle stand.
C Fire.
D Lightning.

34.

When Bobo plucked strings of the instrument above, the strings moved up and down to produce sound. This movement is called

A aeration.
B evaporation.
C vibration.
D stringing.

35. Sound does not travel through a _____, but can travel through solid, liquid or gas.

A straight line.
B curved object.
C vacuum.
D air.

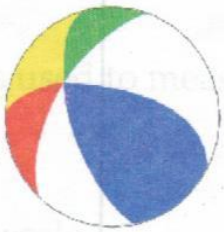

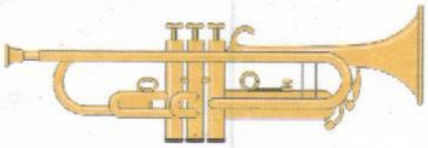

36. When Bobo played music with a guitar he produced low pitch. What are the three things to consider in order to change the pitch?

A Tension, length and thickness of the strings.
B Guitar box, string type, distance.
C Tension, low pitch, high pitch.
D Drum, string size, tension.

37. How can Bobo change the pitch to make it high?

A Make strings long.
B Using thick string.
C Using lose strings.
D Tightening strings.

38. Kgotla is asked to construct simple musical instruments. Which of the following is a wrong instrument?

A Guitar
B Whistle
C Ball
D Trumpet

MODULE 4: FORCE AND MOTION

1. What is a force?

   A It is power.
   B It is exertion of force to pull and push.
   C It is moving.
   D It is friction.

2. Which of the following is **not** a kind of force?

   A Muscular forces, mechanical forces.
   B Electrical forces, magnetic forces.
   C Elastic forces, gravitational forces.
   D Friction force and wind forces.

Use the picture below to answer question 3.

3. A boy called Tom jumped up wishing to touch heaven, but before he could go up further, he was pulled back to the ground by

   A ground forces.
   B gravitational forces.
   C mechanical forces.
   D muscular forces.

4. The car below uses

A elastic force.
B electrical force.
C mechanical force.
D gravitational force.

5. The earth attracts all objects on its surface by a force called

A mechanical force.
B elastic force.
C muscular force.
D gravitational force.

6. Which instrument is used to measure force?

A Ruler.
B Bean balance scale.
C Spring scale.
D Measuring tape.

7. Forces always make things to _____ except

A go faster, go slower, go different directions.
B change shape, start to move.
C change directions and burn.
D dissolve, burn.

8. Which of the following statement is true about force?

A Cannot turn an object.
B Can change the motion of an object.
C Cannot stop an object.
D Can stop an object but cannot change its direction.

9. Two kinds of forces which do **not** have to touch an object are magnetic and

A gravitational.
B friction.
C elastic.
D electrical.

10. Which of the following is **not** an effect of force on an object?

A Hit and shape.
B Compress and change the shape.
C Stress and change the movement.
D Evaporate.

MODULE 5: ELECTRICITY AND MAGNETISM

1. Which statement below describes static electricity?

   A It means electricity that stays.
   B It means moving electricity.
   C It means electricity that is produced by rubbing things together and stays in one place.
   D Electricity that picks up small papers.

2. Which of the following children is demonstrating how to produce static electricity?

   A Mino rubbing shoes on the ground to produce sparks.
   B Masego hitting a rock with a stone and we see sparks.
   C Bobo rubbing a ruler on his hair and then the ruler picks up pieces of paper.
   D Kgotla rubbing a stick into a log of wood to produce fire.

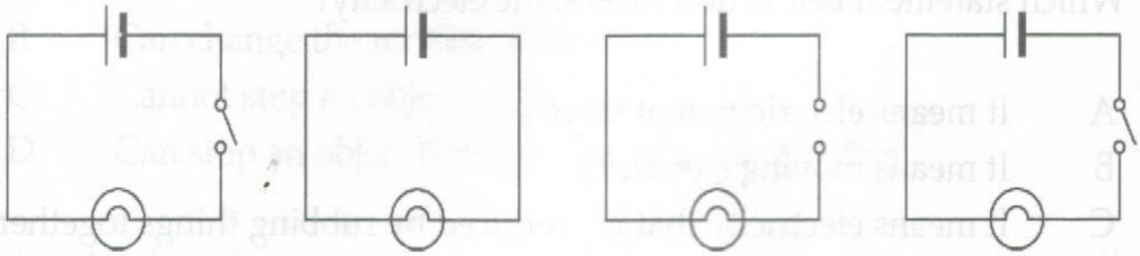

3. Which object is wrongly classified?

	Conductors	Insulators
A	Money clips	Wood
B	Bulb	Glass
C	Copper wires	Plastic
D	Rubber	Battery cell

4. Which statement describes current electricity?

   A The flow of electricity from a battery.
   B A flow of electrons (current) from one place to another along a conductor.
   C Running heat or wire into the wire.
   D The lighting of a bulb using a wire.

5. Which diagram shows a simple series circuit that has a battery / power and a switch to make electric devices work?

A B C D

6. Which of the children shows that electricity only flows in a complete or closed circuit?

A Mino puts a wire from the base terminal to the globe.

B Masego places a ruler on the positive terminal and then one end of it makes the bulb light.

C Bobo puts one end of copper wire at the base terminal and the other at the top or positive terminal, the bulb on the top terminal lights.

D Kgotla puts a copper wire on the terminal and then on the base terminal and the bulb in the house lights.

7. Which of the following statements is true?

A A current cannot flow in a closed circuit.

B A current flows from negative to positive terminal.

C Static electricity is from a battery.

D The more the cells there are in a circuit, the stronger the current.

8. Which statement is false?

A The more the number of bulbs than the batteries the weaker the current.
B A current can flow in a closed circuit.
C Most metals are insulators.
D The number of cells has an effect on the current.

9. Which list has things which can have an effect on the brightness of the lamp?

A Number of cells (number of batteries).
B Wiring.
C Switch.
D Colour of the battery.

10. You made a circuit but the bulb is not bright. Which of the following will you do to make the bulb brighter?

A Increase bulbs.
B Increase the length of the wire.
C Increase the size of the switch.
D Increase the battery number.

MAGNETS

11. Which of the following is **not** a property of a magnet?

A They attract same materials.
B They melt when attracting.
C They have poles.
D They do not show directions.

12. Which of the following pair has magnetic materials?

A Nail, blade.
B Snail, spade.
C Plastic pen, pencil.
D Nail, plastic spoon.

13. Which of the following is **not** a proper way of caring for a magnet?

A Not dropping or throwing it around.
B Not hitting nor heating a magnet.
C Letting magnet to lie around or contacting each other.
D Storing magnets side by side with no keeper between them.

14. This picture 

makes the nail to be

A magnetic.
B electric.
C elastic.
D light.

15. Which of the following can you do in the picture above to increase the magnetism?

A Increase coils and nails.
B Increase cells and coils.
C Increase cells and switches.
D Increase nails and cells.

16. _____ is **not** a use of electromagnets.

A A broom.
B A telephone.
C A loudspeaker.
D A light switch.

17. The following are advantages of electromagnets except that they

A cannot be switched off when not in use.
B can be made stronger or weaker.
C don't become weaker when they are old.
D are smaller and lighter.

MODULE 6: HEALTH AND SAFETY

1. Why do people eat meat?

A To protect their bodies from diseases.
B To repair worn out tissues.
C To supply their bodies with energy.
D To provide fibre.

2. Carrots, tomatoes, eggs and milk are

A protective food.
B energy giving food.
C body building food.
D supplementary or other food.

3. Bread and rice are examples of

A energy giving foods.
B protective foods.
C body building food.
D Supplementary.

4. Which food group below has all nutrients?

A Rice.
B Meat.
C Fruits.
D Milk.

5. _____ is a group that builds bones and teeth.

A Proteins.
B Minerals.
C Fats.
D Roughage.

6. Which statement is true about nutrients?

A Build, protect and helps people grow.
B Nutrients heal people.
C Food do not have nutrients.
D Nutrients destroy our eyes.

7. Which of the following is **not** a way of handling food?

A Clean hands before handling food.
B Handle food on a clean surface.
C Cover food in clean utensils.
D Cook in an uncovered pot.

8. Which food nutrients do fruits and vegetable contain?

A Proteins.
B Carbohydrates.
C Vitamins and minerals.
D Fats.

9. Proper handling of food makes people to be

A sick.
B better.
C healthy.
D ill.

DISEASES

10. What is a disease?

A Disorder which makes the body to be fit.
B A disorder which makes the person happy.
C A disorder of the body that result in sickness or illness.
D Bodily change that makes people to be healthy.

11. What are communicable diseases?

A Diseases that can be passed on from one person to another.
B A chicken disease that affects people.
C Diseases that can be transmitted through talking.
D Diseases that is common for all people.

12. What is a non-communicable disease?

A Diseases that can be passed from sheep to people.
B A disease that passes from a person to animals.
C A disease that cannot be passed from one person to the other.
D A disease that commonly attacks people.

13. _____ is a list of communicable diseases.

A Bilharzia, STD tuberculosis.
B STD, influenza, high blood pressure.
C Polio, ringworms, headache.
D Intestinal infection, lung disease, nose bleeding.

14. Which of the following diseases is non-communicable?

A AIDS.
B Scabies.
C Cancer.
D Syphilis.

15. Which communicable disease is **not** spread through water?

A Bilharzia.
B Diarrhoea.
C Cholera.
D Gonorrhea.

SAFETY

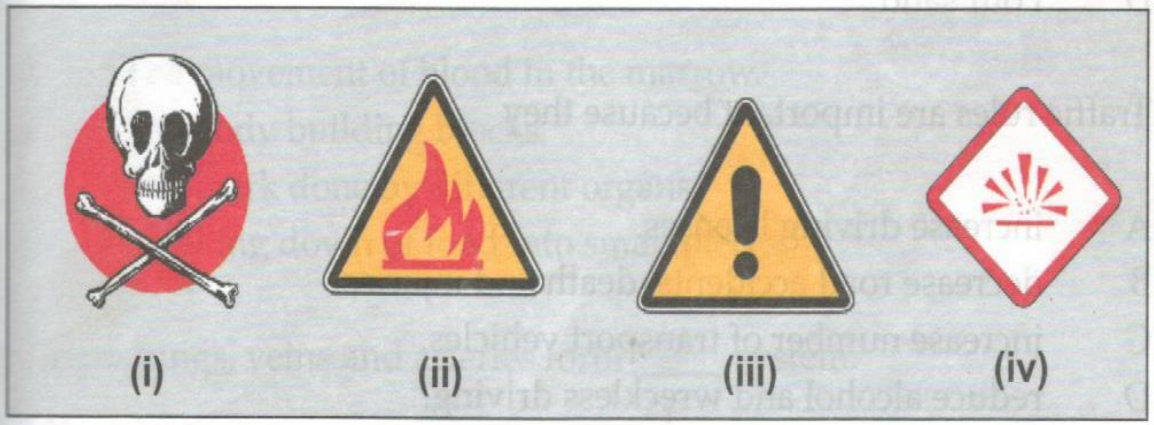

16. What is safety?

A Thing that makes people not to be hurt.
B Fire burning and people running away from it.
C The prevention of danger or injury.
D Sleeping and not talking so that no one can hurt you.

17. Why should people **not** run on a polished classroom floor?

A To avoid falling.
B To avoid making the floor dirty.
C To avoid making noise in the classroom.
D To avoid being beaten by the teacher.

18. Match the following safety symbols with their interpretation by writing the letter of the correct description.

A Flammable fire.
B Explosive.
C Toxic / poison.
D Harmful.

19. _____ is **not** a way of putting out fire.

A Remove the heat.
B Remove oxygen / air.
C Remove flammable fuel.
D Open windows.

20. How would you help someone whose clothes caught fire?

A Wrap him with a blanket.
B Tell him / her to run away.
C Put him / her in the room.
D Close doors of the room she is in.

21. A house is burning, how would you put out the fire?

A Pour water.
B Fire extinguisher.
C Wrap it with a blanket.
D Pour sand.

22. Traffic rules are important because they

A increase driving licenses.
B decrease road accidents, death and injuries.
C increase number of transport vehicles.
D reduce alcohol and wreckless driving.

23. A driver had an accident; he knocked a tree and went out through the ca windscreen. This means the driver

A was drunk.
B was thin and was easily thrown away.
C was not wearing a safety belt.
D was bewitched by an old woman in the village.

24. Why do people apply first aid?

A To save the person's life before receiving medical help.
B To practise being a doctor.
C To show love to the person.
D To show care and respect to the injured person.

25. Which of the following should **not** be in a first aid kit?

A Safety pins.
B Iodine.
C Scissors.
D Water.

MODULE 7: BODY SYSTEMS

1. Describe a body system.

A The movement of blood in the marrow.
B The body building blocks.
C The work done by different organs.
D Breaking down of food into small pieces.

2. Heart, lungs, veins and arteries form _____ system.

A digestive.
B circulatory.
C respiratory.
D excretory.

3. Which is a correct order?

A Organ cell, system tissue.
B Tissue, cell system organ.
C Cell, tissue, organs, system.
D System organ, tissue cell.

4. Which of the following is **not** a body system?

A Poultry.
B Digestive.
C Respiratory.
D Circulatory.

5. Name the system that has spinal cord and brain.

A Excretory.
B Respiratory.
C Skeletal.
D Nervous system.

6. Digestive system is to stomach as respiratory system is to

A bones.
B trachea.
C kidneys.
D heart.

7. Bones are to skeletal system as _____ system is to penis.

A excretory.
B digestive.
C reproduction.
D muscular.

8. All the following are organs of a male reproductive system except

A uterus.
B testicles.
C penis.
D urethra.

9. Which organ is found in both male and female reproduction system?

A Ovary.
B Testes.
C Penis.
D Urethra.

10. Which organ is wrongly classified with the ones below?

A Pancreas.
B Anus.
C Lungs.
D Oesophagus.

11. Sperms ejaculation and menstruation periods both fall under _____ system.

A circulatory.
B excretory.
C reproduction.
D making a child.

12. Lebone does **not** pass urine well; the doctor has to check her _____ system.

A circulatory.
B excretory.
C reproduction.
D muscular.

A breaks the food in the stomach.
B moves food from mouth to the air.
C carries blood through the body.
D helps people to move.

14. Which system helps people breath in and out?

A Digestive.
B Circulatory.
C Muscular.
D Respiratory.

15. Reproduction system

A makes sexual abuse.
B increases raping.
C produces babies.
D decreases HIV and AIDS.

16. _____ removes body waste products.

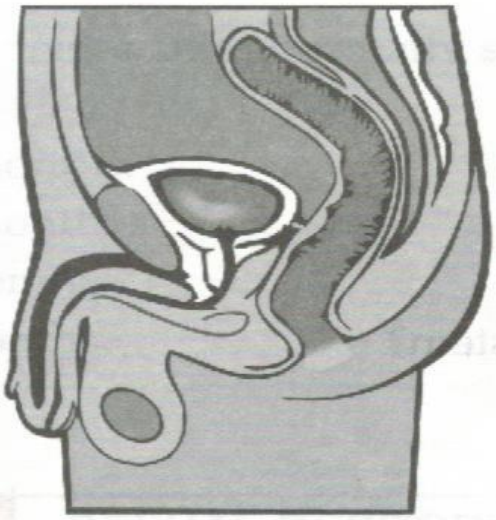

A Digestive system.
B Excretory system.
C Circulatory system.
D Muscular system.

17. The circulatory system

A spreads AIDS throughout the body.
B spreads blood throughout the body.
C spreads waste products to the mouth.
D uses only the heart.

18. What is the role of the heart in the body?

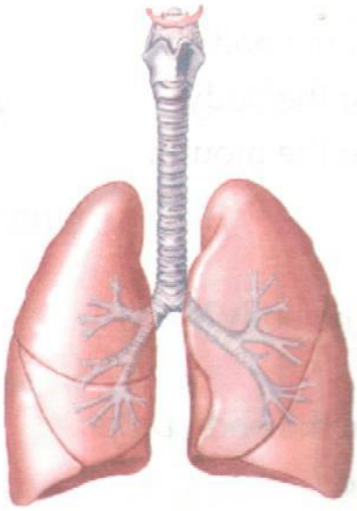

A Pumps blood to and from the body parts.
B Beats to keep people alive.
C Makes people breath air in and out.
D Beats fast when running.

19. This above diagram is of a

A male reproductive system.
B snake reproductive system.
C female reproductive system.
D all male, female and snake system.

Study the diagram below to answer questions 20 to 21

20. Which system is shown by the above picture?

A Excretory.
B Nervous.
C Respiratory.
D Digestive.

21. Which is **not** part of the above system?

A Heart.
B Alveoli.
C Trachea.
D Diaphragm.

22. Where does fertilisation take place in the female reproductive system?

A Testis.
B Urethra.
C Womb.
D Oviduct.

23. Where are sperms produced in male reproduction system?

A Testis.
B Urethra.
C Womb.
D Oviduct.

24. How many sperms make a child?

A One.
B Two.
C Three.
D Four.

25. How long does a child normally stay in its mother's womb?

A 12 months.
B 16 months.
C 9 months.
D 6 months.
